

SAEED MOHAMMADPOUR

Senior Python Backend Developer | Django & FastAPI | Data Automation Specialist

United Kingdom (Remote) | product.with.saeed@gmail.com

LinkedIn: [linkedin.com/in/product-with-saeed](https://www.linkedin.com/in/product-with-saeed) | GitHub: github.com/product-with-saeed

PROFILE

Senior Python developer with 15+ years building production backend systems, APIs, and data automation pipelines. Specialized in data-intensive applications where web scraping, ETL processing, and scalable architecture are critical. Former CTO with proven ability to deliver complete solutions from system design to deployment. Known for clean code, comprehensive documentation, and meeting deadlines.

CORE TECHNICAL SKILLS

Backend Development: Django (Expert), FastAPI, Flask, REST API Design, Celery

Data & Automation: Scrapy, Selenium, BeautifulSoup, Pandas, ETL Pipelines

Databases: PostgreSQL, MySQL, Redis, Database Design & Optimization

Infrastructure: Docker, Linux, Git, CI/CD, System Architecture

Cloud Platforms: AWS, DigitalOcean, Heroku

Languages: Python (Expert), JavaScript, SQL

PROFESSIONAL EXPERIENCE

Senior Python Backend Developer (Freelance) | Remote | Mar 2025 – Present

- Building production Django and FastAPI backends for e-commerce, FinTech, and data-driven platforms
- Developing automated data collection systems processing 10K+ records daily
- Architecting scalable database schemas and REST APIs for client applications
- Delivering complete solutions: backend infrastructure, documentation, deployment, and support

Key Projects:

- E-commerce platform migration: Extracted 25,000 products, built Django backend with full product management
- Job aggregation API: Built FastAPI system processing 10K+ job listings daily with automated scraping
- Financial transaction API template: Open-source Django REST Framework template for FinTech applications

Technical Lead & Senior Backend Developer | Kian Ravesh Data Bonyan, Tehran | Jun 2023 – Feb 2025

- Led backend development for SaaS analytics platform serving enterprise clients
- Designed and implemented scalable Python/Django architecture handling high-volume data processing
- Built ETL pipelines integrating multiple data sources with automated validation
- Optimized database performance and API response times, reducing latency by 40%
- Managed technical documentation, code reviews, and deployment processes

CTO & Lead Engineer | Varsan Samaneh Radin, Tehran | Aug 2019 – Jun 2023

- Owned technical architecture and backend development for multiple SaaS products
- Built production Django applications with PostgreSQL, Redis, and automated data workflows
- Established development standards: code quality, testing, documentation, deployment pipelines
- Mentored engineering team on Python best practices and system design
- Delivered data-intensive projects: web scraping systems, API integrations, analytics platforms

Senior Python Developer & Software Engineer | Various Companies | 2001 – 2019

- 10+ years building backend systems, data processing applications, and integration solutions
- Developed web scraping and automation tools for e-commerce, real estate, and job aggregation
- Notable project: Investment mapping system processing 10,000+ geo-located opportunities from ArcGIS shapefiles
- Built and maintained production systems in Django, Flask, and custom Python frameworks

FEATURED OPEN-SOURCE PROJECTS

Django Financial API Template

github.com/product-with-saeed/Django-Financial-API-Template

Production-ready Django REST Framework template for FinTech applications with JWT authentication, transaction management, and modular architecture.

Production-Grade Scraper Template

github.com/product-with-saeed/scrapy-production-template

Complete Scrapy project with PostgreSQL pipeline, Docker deployment, 3 working spiders, and comprehensive documentation. Successfully scraped 1000+ records.

EDUCATION

B.Sc., Software Engineering | Azad University, Mashhad | 1997 ÷ 2001

KEY ACHIEVEMENTS

- Delivered 50+ Python projects involving backend development, data automation, and web scraping
- Built e-commerce backend handling 25,000+ product records with automated data migration
- Developed geo-processing system importing 10,000+ investment opportunities from ArcGIS data
- Created reusable templates and frameworks now used by multiple teams and open-source community
- Consistently deliver production-ready, well-documented code with less than 10% post-launch issues

LANGUAGES

English: Fluent (B2+/C1) | Persian: Native | Turkish: Intermediate

Available 40 hours/week for remote backend development, data automation, and API projects
